(Pharmacia) with a modified polylinker; Site 1: EcoR I;
Site 2: Not I; NCI CGAP EDI is a normalized GDNA library
containing the following tissue(s): Chondrosarcoma cell
line CS5. The library was constructed according to
Bonaldo, Lennon and Soares, Genome Research, 6:791-806,
1996. First strand cDNA synthesis was primed with an
oligo-dT primer containing a Not I site. Double stranded
CDNA was ligated to an EcoR I adaptor, digested with Not
I, and cloned directionally into pT7T3-Pac vector. The
oligonucleotide used to prime the synthesis of
first-strand cDNA contains a library tag sequence that is
located between the Not I site and the (dT).18 tail. The
sequence tag for this library is GCTCAAGGCT.

Library construction (Standard Protocol): All procedures have been described in detail elsewhere (Soares et al., 1994; Bonaldo et al., 1996; Jiang et al., 2001). Total cellular RNA from each sample was isolated by using STAT-60 reagent (Tel-Test, Friendswood, TX) and the poly(A)+ RNA was obtained by two rounds of purification with the Oligotex mRNA isolation kit (Qiagen) according the manufacturer's instructions. The libraries were constructed essentially as described by the manufacturer's
                                                                                                                                                                                                                                                                                                                                                                                                          (http://www.circlearanch.com/home.html). These heifers, while not registered have known Angus pedigrees going back at least 4 generations. Samples collected: The samples consisted of the following: germinal vesicle-stage occytes; in vitro derived embryos (2-cell, morula) hastocyst and nuclear transfer blastocyst); in vivo blastocysts and conceptuses (days 8, 14, 16 and 18); corpora lutea (days 3, 5, 8, 14, 16, 18 and 35); ovarian follicles (days 0, non-recruited, recruited, early

The clones were sequenced at the University of Missouri-Columbia DNA Core Facility. After production of the libraries, equal numbers of recombinants from each library were pooled to produce a single mixed library
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          columns (Invitrogen-Life technologies). The cDNAs derived from each developmental stage of a particular tissue were mixed on an equimolar basis and ligated directionally into the NotI and Sall sites of the pCNV-SPORT6 vector (Invitrogen). After ligation of the inserts, the plasmids were electroporated into DH10B bacteria. Preliminary Library Characterization: Randomly chosen clones from each library Characterization: Randomly chosen clones from each
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              the oligonucleotide used to prime first-strand synthesis. Second strand synthesis was performed with T4 DNA polymerase in the presence of DNA ligase and RNase H. After second strand synthesis, the double-stranded cDNAs were ligated to SalI adapters (Invitrogen-Life Technologies) and digested with NoII. The cDNAs were size selected by passage through cDNA size fractionation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      instructions provided with the SuperScript Plasmid System (Invirogen, cat. no. 18248-013). Briefly, lncg of poly(A)+ RNA was annealed at c37 degrees with loncg of NotI-tag-dT18 oligonucleotide (GCTGCTCGCGGCCGC-tag-T18). and reverse transcribed at c37 degrees with SuperScript II (Invitrogen) reverse transcriptase (Jiang et al., 2001). The 'tag' represents a tissue/stage-specific ten-base
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               TAG_TISSUE=Conceptus-Corpus Luteum (mixed)
TAG_SEQ=Not found"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  sequence identifier

//Clone lib="NIH MGC 281"
//Clone | Togan: Blastcoyst; Vector: pExpress-1; Site 1:
ECORV; Site 2: Not1; RNA obtained from pluripotent cell
line derived from blastcoyst inner cell mass (cell line
HSF-6, NIH Registry designation UCO6. Positive for OCT4
expression by rtPCR, positive for SSBA-4,
Tra-1-81, Tra-1-60 by immunofluorescence. Negative for
SSEA-1 by immunofluorescence Passage 62. cDNA was primed
using oligo-dT primer:
5'-pGACTAGTCTGAGTCGCGAGCGCCCCC(T)25-3' and cloned into
the ECORV/NotI sites of pExpress-1. Size-selection >1.25
kb resulted in an average insert size of 2.0 kb. This
primary library is normalized (non-normalized primary
library is NIH MGC 280) and was constructed by Express
Genomics (Prederick, MD). Note: this is a Mammalian Gene
Collection library."

The present invention describes polynucleotide sequences (I) which encode prostate-specific proteins (II). (I) and (II) have cytostatic activity, and can be used in vaccine production and gene therapy. (I), (II), antibodies to (II), fusion proteins comprising (II), and isolated T cells prepared using (I) or (II) are used treat cancer in a patient. (I) and

The cancer that is diagnosed or treated is particularly prostate cancer. (I) and (II) can be used in vaccines. The antibodies or (I) can be used for monitoring the progression of cancer in a patient. (I) and (II) can also be used to improve diagnostic and therapeutic methods for prostate cancer. They can indicate the level of metastasis as well as the prostate volume. AAH93357 to AAH933944 and AAM01115 to AAM01318 represent polynucleotide and amino acid sequences used in the exemplification of the present invention

The antibodies are useful for detecting the presence of cancer, especially prostate cancer. The polypeptides, polynucleotides and the antigen-presenting cells are useful for stimulating and/or expanding T cells specific for a tumour protein, and for inhibiting the development of cancer especially prostate cancer. Compositions comprising the polynucleotide and/or polypeptide are useful for stimulating an immune response, and for treating cancer. The oligonucleotide is useful for detecting cancer. The present sequence is a prostate specific polynucleotide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention describes a fusion protein comprising at least one amino acid sequence of immunogenic portions of any of the 3 sequences not defined in the specification, or sequences having at least 70 or 90 % sequence identity to any one of the 35 sequences defined in the USPTO web site, which is encoded by any of the 4 nucleotide sequences not defined in the specification. The fusion protein, composition and methods are useful for diagnosing, preventing and/or treating cancer, particularly prostate cancer. The proteins are useful as markers to indicate the presence or absence of cancer. This sequence represents a prostate cancer therapy associated cDNA. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the US patent office at sequence.html?DocID=US20020192763
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Xu J, Dillon DC, Mitcham JL, Harlocker SL, Jiang Y, Fanger GR, Retter MW, Stolk JA, Day CH, Vedvick TS, Li SX, Wang A, Skeiky YAW, Hepler WT, Hendersen RA, Mcneill PD, Houghton RL, Y De BassolsCV, Foy TM;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Prostate specific protein and its encoding treatment and diagnosis of prostate cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 1195 BP; 382 A; 221 C; 233 G; 359 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                 The present invention relates to methods of detecting a prostate cancer-
cc associated transcript in a cell from a patient. The method comprises
cc contacting a biological sample from the patient with prostate cancer-
cc associated polynuclectides (designated PC genes) that selectively
cc hybridise to a sequence that is at least 80% identical to them. The
cc prostate cancer-associated polynuclectide sequences are differentially
cc expressed in prostate tumour tissue or in prostate cancer and are derived
cc (e.g. mice, sheep and dogs). The methods of the invention are useful for
cc diagnosing and treating prostate cancer in mammals. The prostate cancer,
cc associated genes are useful for diagnosing or treating prostate cancer,
cc as well as for identifying medulators of prostate cancer or agents that
cc inhibit prostate cancer. The nucleix acid sequences are particularly
cc useful in gene therapy, as a vaccine or in antisense applications.
cc ABK92115-ABK92263 represent prostate cancer-associated polynucleotide

The PSPs and their coding sequences are useful for stimulating an immune response in a patient, or for treating prostate cancer in a patient and for determining, detecting or diagnosing the presence of a cancer in a patient. The present sequence was used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New prostate-specific proteins and genes, useful in gene therapy, particularly for stimulating an immune response in a patient, or treating prostate cancer in a patient, as well as for diagnosing prostate cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Xu J, Dillon DC, Mitcham JL, Harlocker SL, Jiang Y, Henderson

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     prostate cancer by comparing the level of expression of a marker in a patient sample and the normal level of expression of the marker in a control non-prostate cancer sample, where a significant increase in the level of expression of the marker in the patient sample and the normal level indicates that the patient is afflicted with prostate cancer. Nucleic acids of the invention are useful for diagnosing or treating prostate cancer, and may be useful in gene therapy. Sequences given in ADB75177-ADB75631 represent marker CDNA and proteins. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Schlegel

CC alleles. ADBI3563 is a polypeptide encoded by a human prostate specific CC cDNA, one of 648 disclosed as new. Also included are nucleic acids cencoding the proteins and peptides, expression vectors, a host cell cransformed with the vector, an isolated antibody (or antigen binding fragment) that specifically binds to the protein or peptide, detecting CC the presence of a cancer in a patient (comprising contacting a patient CC sample with a binding agent that binds to the peptides or a polypeptide CC sample with a binding agent that binds to the peptide to a predetermined cut the agent and comparing the amount of polypeptide to a predetermined cut off value to determine the presence of cancer), a fusion protein CC comprising the peptides or proteins, stimulating or expanding T cells specific for a tumour protein, stimulating or expanding T cells specific for a tumour protein a composition comprising the peptides, conclete acids, antibodies or compounds, determining the peptides, concer in a patient and treating prostate cancer in a patient with the peptides or antigen presenting cells that express CC (the peptides so that the T cells proliferate, and administering the peptides (that hybridises to nucleic acide encoding them), is used to detect the concretin a patient. The peptides, nucleic acide encoding, or antigen-presenting cells expressing the nucleic acide encoding.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            18-NOV-1999

The peptides comprise a fragment ADB13563 of that contain naturally processed T-cell epitopes for 3 class I major histocompatibility complex (MHC) alleles. ADB13563 is a polypeptide encoded by a human -----

The present sequence is a known cDNA showing sequence similarity to one of the disclosed human prostate specific cDNAs. Note: Except where otherwise indicated, the sequence for this patent did not form part of the printed specification, but obtained in electronic format directly from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 1195 BP;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    seqdata.uspto.gov/sequence.html?DocID=20030185830
